

# ZyXEL VES-1124 V3.50(LP.1)

## Release Note/Manual Supplement

---

**Date:** Jan. 26, 2005

This document describes the features in the VES-1124 product for its 3.50(LP.1) release.

### ***Support Platforms:***

---

ZyXEL VES-1124 V3.50(LP.1) supports models: ZyXEL VES-1124

### ***Version:***

---

ZyNOS Version: V3.50(LP.1) | 11/02/2004 17:20:55

BootBase Version: V1.01(VES-1124) | 01/24/2005 18:59:33

### ***Known Issue:***

---

1. Ethernet AC101 PHY are not compatible with specific PHY.
2. Cannot generate pause frame when multiple vDSL ports send packets to uplink port.
3. Bandwidth control works only when Flow control enabled.
4. When GVRP enable, leave timer and leave all timer should be increased when lots of dynamic VLAN join.
5. Per port PVID setting is limited in set range(1-255, 256-511,..., 3840-4094). If port 1 is set PVID in one of the set range, the other ports PVID also should be set to the same set range.
6. Keep pressing port test button before accomplish port test will cause system reboot.

### ***Bug Fix V3.50(LP.1):***

---

1. Process Port Test before VDSL link up will cause system crash.
2. Mirror function cannot work correctly when mirrored port is port 25 and port 26.

### ***Bug Fix V3.50(LP.1)b3:***

---

1. Gray out the edit box of Management VID in port based VLAN mode.
2. Gray out the edit box of VID in Static MAC Forwarding page for port based VLAN mode.
3. Remove one garbage string in port based VLAN table that is in last row and last column.
4. Fix bug that pause timer may overflow problem.
5. Add workaround when READY BIT no response.
6. Fix bug that remote PHY invalid setting may cause traffic hang lock.
7. Change LED light on to blinking when packet into device.

### ***Bug Fix V3.50(LP.1)b2:***

---

1. Port test in Diagnostic menu will fail in port based vlan mode.

### ***Bug Fix V3.50(LP.1)b1:***

---

1. Packet from CPU will flood to other ports in port based vlan.
2. VDSL CPE Ethernet link down will not flush arp table.

## **Bug Fix V3.50(LP.0):**

---

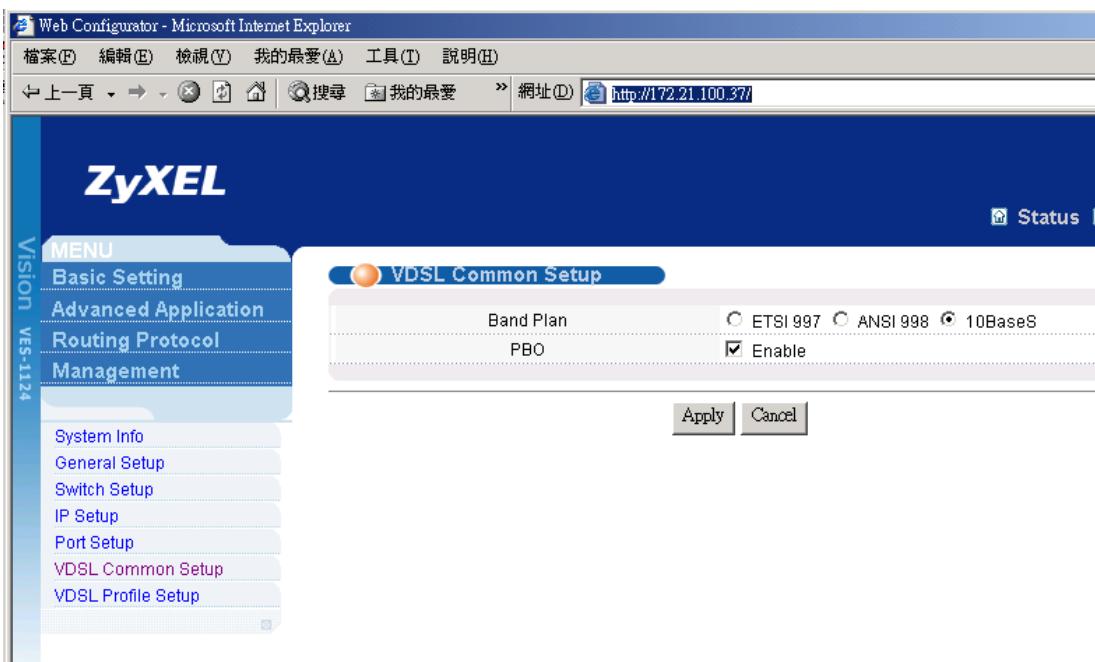

1. FTP cannot work correctly.
2. MIB display error.
3. Help Page binding problem.

## **Features:**

---

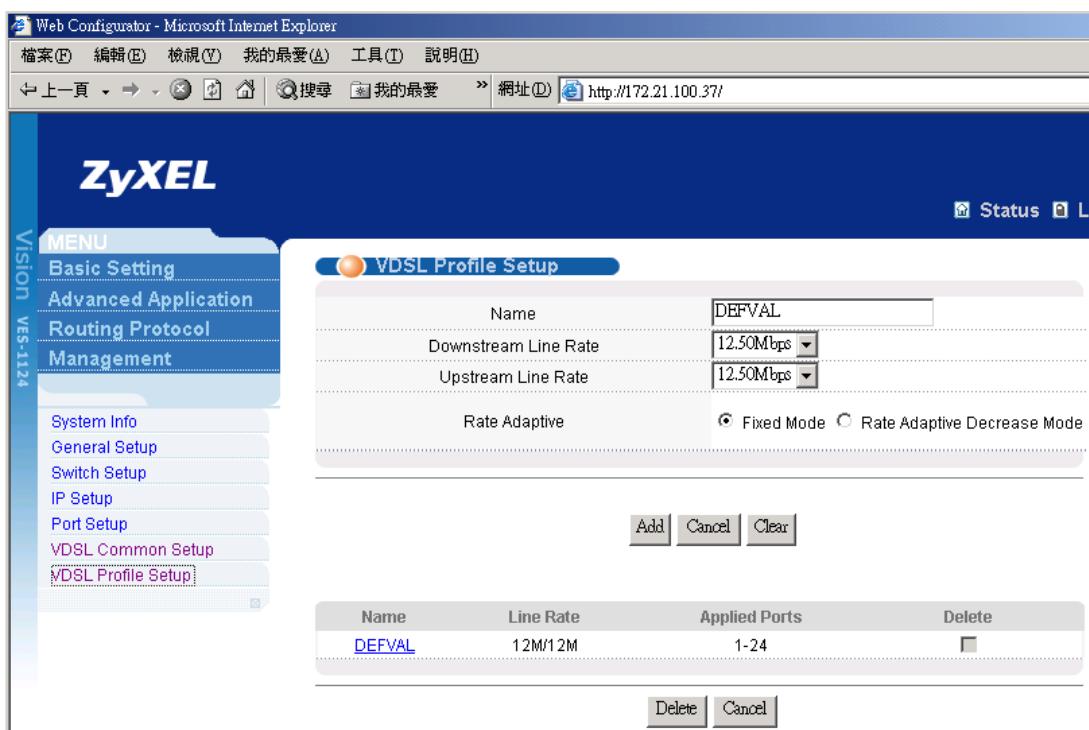

### **1. VDSL Common Setup**

Providing mechanisms for setting VDSL system-wide parameters, including band plans of ETSI 997, ANSI 998, 10BaseS, and Power Back Off (PBO) enable/disable.

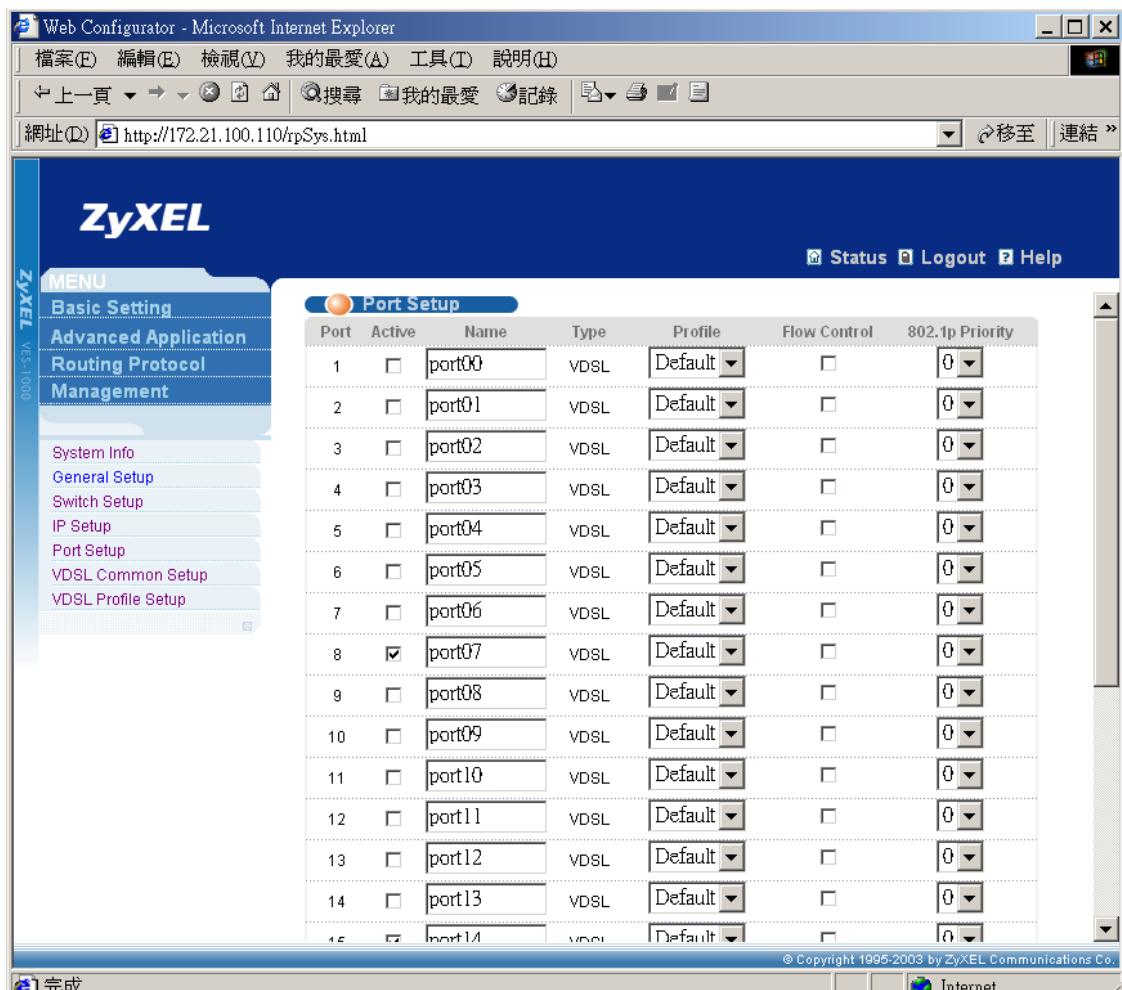

### **2. VDSL Profile Management:**

The profile management is used for creating/modifying/deleting VDSL profiles used by each ports for different VDSL parameters. Currently we provide maximum 24 profiles for all system. One of the profiles named "DEFVAL" is the default profile of the system and can not be deleted. Any changes of the profiles will cause the VDSL port retrain.

### 3. VDSL Port Profile Assignment

In the Port Setup page, the user can assign which profile to be used for each port.

### Firmware Upgrade:

The VES-1124 uses FTP to upgrade firmware in run-time through its built-in FTP server. You can use any FTP client (for example, [ftp.exe](#) in Windows) to upgrade VES-1124. The upgrade procedure is as follows:

#### **Upgrade VES-1124 FW:**

```
C:\> ftp <VES-1124 IP address>
User : <Enter>
Password: 1234
230 Logged in
ftp> put 350LP1C0.bin ras
ftp> bye
```

Where

- User name : just press <Enter>
- Password : the management password, 1234 by default

- 350LP1C0.bin : the name of firmware file you want to upgrade
- ras : the internal firmware name in VES-1124

### ***Configuration Upgrade:***

---

The VES-1124 uses FTP to upgrade configuration in run-time through its built-in FTP server. You can use any FTP client (for example, [ftp.exe](#) in Windows) to upgrade VES-1124. The upgrade procedure is as follows:

#### **Upgrade VLC1124A configuration:**

```
C:\> ftp <VES-1124 IP address>
User : <Enter>
Password: 1234
230 Logged in
ftp> put 350LP1C0.rom rom-0
ftp> bye
```

Where

- User name : just press <Enter>
- Password : the management password, 1234 by default
- 350LP1C0.rom : the name of configuration file you want to upgrade
- rom-0 : the internal configuration name in VES-1124

### ***Commands Table:***

---

- Partial VDSL Profile and VDSL Port commands are not fully supported

sys	snmp	GetCom [<community> munity ] SetCom [<community> munity ] TrustedH [<hsot>] ost trapCom [<community> munity ] trapDest [<destination> ] disp	Set or view community of GetRequest. Set or view community of SettRequest. Set or view trusted host. Set or view community of Trap Set or view trap server. View snmp setting.
cluster	active inactive add remove ShowMe meber showCan	<name> <name> <MAC addr> <password > <MAC addr> Show member list Show candidate list	Active cluster Inactive cluster Add a member into cluster Remove a member from cluster. Show member list Show candidate list

	dicate status	Show cluster status
config	save	Save configuration
Switch commands: The following commands are under “ <b>sys switch</b> ”		
garp	status timer <join timer(ms)> <leave timer(ms)> <leave all timer>	show garp timer status set garp timer <join timer> <leave timer> <leave all timer>
gvrp	status enable disable	show gvrp status enable gvrp function disable gvrp function
qos	defpri <port> [<0..7>]  map <0..7> [<queue>]	set the default ingress User Priority for this port <port>. User Priority to Traffic Class mapping.
vlan1	port q status defaultVI D accept gvrp	show port <port> VLAN information. set defaultVID<VID> of this port<port>. set acceptFrameType of this port. Enable/disable the gvrp function of this port <port>.
svlan	cpu <VLAN ID> setentry <name> <VID> <port> <adctl> <<tagctl> set static entry.<VID>> delentry <VID> active <VID>  inactive <VID>	Set VLAN ID of cpu. delete static entry<VID> active the static entry with <VID> inactive the static entry with <VID>
vlan	list list <all vid start_vid end_vid>	show the static entry table. Show vlan1q current table.
driver	count disp  clear	Show the switch NDIS level counters(CPU interface) Clear the switch NDIS level counters(CPU interface)
rstp	bridge enable disable priority <priority> maxAge <max age>	<b>Please reference to 802.1w</b> Enable RSTP Disable RSTP System Priority Max age timer

	helloTim <hello time>	Hello timer
	e	
	forwardD <forward delay	Forward delay time
	elat <time>	
	version <STP:0 RSTP:2>	Operation Mode
port		
	enable <Port_NO>	Enable this port under RSTP protocol
	disable <Port_NO>	Disable this port under RSTP protocol
	pathCost <Port_NO>	Cost of this path
	priority <Port_NO>	Priority
	edgePort <Port_NO>	If this port is an edge port
	p2pLink <Port_NO>	Whether the Port concerned can only be connected to exactly one other Bridge or can be connected to two or more Bridges
	mcheck <Port_NO>	802.1w chapter 17.18.10
lacp		
agg		<a href="#">Please reference to 802.3ad</a>
port		Display aggregation information
	enable <Port_NO>	
	disable <Port_NO>	
	status <Port_NO>	
	actorAdm	Actor means local side
	activity	[Port_NO [0:passive 1:active] ]
	display	[Port_NO ]
	key	[Port_NO [Key] ]
	priority	[Port_NO [Priority] ]
	timeout	[Port_NO [0:long_timeout 1: ]hort_timeout]
	status	
	keymgnt [on off]	
	sysPriorit <priorit>	
	y	
dot1x		<a href="#">Please reference to 802.1x</a>
	enable	Enable dot1x
	disable	Disable dot1x
	status	Show dot1x global status
port		
	enable <Port_NO>	Enable this port
	disable <Port_NO>	Disable this port
	reauth <Port_NO> <on off>	Re-authentication

	reauthPer <Port_NO>	<value>	Re-authentication period
	iod		
set	status <Port_NO>		Port status
	auth <profile   radius>		Set authentication method
radius	portcontr <port-no>	<auto   auth   unauth>	Set port authentication status
	server <IP>		Server IP
	secret <secret>		Secret key
	port <port>		Server port
profile	show		Display server setting <b>(Won't be saved in flash)</b>
	add <username>	<passwd>	Add a user profile
	delete <idx>		Delete a user profile
	list		List profile setting
class			Class setting
	display		display run-time status
l2set	<src port>	<src MAC>	Set src/dest port/MAC combination
	<class id>	<src vid>	
	del	<dest port>	Delete this class
bmsto			Broadcast Storm Control
rm			
	disable		Clear current run-time settings
	type <type>		Broadcast/Multicast/Both
	basis <type>		Pkt/Byte
	display [index]		Display ports setting
	interval [value]		Set/display monitor interval
	set <port>	<dhreshold>	Threshold:# of pkt can be passed in the interval
		<direction>	Direction:ingress/egress
	del <index>		Disable on this port
mac	static		Static MAC setting
	enable		Clear current run-time settings
	display [port]		display run-time status
	set <port>	<MAC Addr.>	Set static MAC of the port
	del <port>	<MAC Addr.>	Delete static MAC of the port
filter			MAC filter setting
	enable		Clear current run-time settings
	display		display run-time status
	set <src>	<src MAC>	Set src/dest port/MAC

	port>	<src vid>	port>	<dest vid>	combination ( Use "*" as "don't-care" in each field)
mirror					Mirror setting Clear current run-time settings
	disable				display run-time status
					Set src/dest port/MAC combination for mirror settings ( Use "*" as "don't-care" in each field)
		<input ou tput both >			
	port	<port>			What port mirror to
bw					Bandwidth Control setting Clear current run-time settings
	disable				display run-time status
					Set src/dest port/MAC combination ( Use "*" as "don't-care" in each field)
trunk					Trunking setting Clear current run-time settings
	disable				display run-time status
					Set trunking group del trunking group
monit	Set				Set voltage, temperature
or					
	Status				Show Monitor status
Ip	dhcp	<Iface>	mode	<none   client>	Change DHCP mode for interface <Iface>
				status	Show DHCP status
				client	Release the IP address
				release	Renew the IP address.
				renew	

- Following commands are not fully supported

Profile commands: The following commands are under “vds profile”

list			List profile
create	<profile name>		Create a new profile with default setting

delete	<profile name>			Delete a profile
apply	<profile name>	<port number   all>		Apply current profile setting to other port
display	<profile name>			Display setting of current profile
set	<profile name>	name <profile name>		Set the profile name of current profile
		uspayloadrate	max min	Set the max upstream payloadrate Set the min upstream payloadrate
		dspayloadrate	max min	Set the max downstream payloadrate Set the min downstream payloadrate
		rate-adaption	fix adaption	Set rate-adaption mode to fixed mode Set rate-adaption mode to adaption mode
		snr	max min	Set value of max snr Set value of min snr
		upstream	target	Set value of upstream target snr
		downstream	target	Set value of downstream target snr
		compatible-mode	adsl	Set to adsl compatible-mode
		usinterdelay	pots	Set to pots compatible-mode Set value of upstream interleave delay
		dsinterdelay		Set value of downstream interleave delay
		rfi	disable standard	Set rfi to disable Set rfi to annex f standard Set rfi to etsi standard Set rfi to t1e1 standard
vdsl	Port	<port number   all>	enable disable retrain Re-provision reset remote-reset	Set the port to line enable Set the port to line disable Re-train operation for the port Re-provision for the port Reset for the port Remote-reset CPE for the port Send EOC loopback packet for the remote test
		<port number>	remote-test	
			config status counter	Display config setting Display current status for the port Clear counter for the port
vdsl	bandplan			Set bandplan for vdsl system configuration
	Pbo	Enable Disable		Set PBO to enable Set PBO to disable

### ***MIB support:***

---

The following is the private vdsl related MIB currently supported by VLC-1124A:

- accessSwitchVdslLineTable
- accessSwitchVdslVtuoPhysTable
- accessSwitchVdslVturPhysTable
- accessSwitchVdslVtuoInventoryTable
- accessSwitchVdslVturInventoryTable
- accessSwitchVdslVtuoIntervalTable
- accessSwitchVdslVturIntervalTable
- accessSwitchVdslLineConfProfileTable
- accessSwitchVturDevTable
- accessSwitchVturConfTable
- accessSwitchVturStateTable
- accessSwitchVdslVtuoPhyMCMTable
- accessSwitchVdslVturPhyMCMTable

### ***Test Items:***

---

1. VDSL profile create/modify/delete, and assign the profile to the specific VDSL port.
2. VDSL port retrain.
3. Load factory default.
4. IP Setting
