

# Visualization of data from assays in microtitre plate or slide format

Wolfgang Huber

April 15, 2011

The `splots` package provides a single function, `plotScreen`, for visualising data in microtitre plate or slide format. Here we show a short demo of its parameters. First, we generate example data:

```
> library("splots")
> screen = lapply(1:12, function(i) cumsum(rnorm(384)))
> names(screen) = paste("plate", LETTERS[seq(along=screen)])
```

```
> toLatex(sessionInfo())
```

- R version 2.13.0 RC (2011-04-05 r55311), i386-apple-darwin9.8.0
- Locale: C/en\_US.UTF-8/C/C/C/C
- Base packages: base, datasets, grDevices, graphics, methods, stats, utils
- Other packages: plots 1.18.0
- Loaded via a namespace (and not attached): RColorBrewer 1.0-2, grid 2.13.0, tools 2.13.0

Table 1: The output of `sessionInfo` on the build system after running this vignette.

```
> plotScreen(screen, ncol=3)
```

```
> plotScreen(screen, ncol=2, do.legend=FALSE)
```

```

> plotScreen(screen, ncol=4, fill=c("white", "darkblue"),
+           main="Example data",
+           legend.label=expression(bar(x) == sum(x[i], i==1, n)))

```

```

> for(i in seq(along=screen))
+   screen[[i]][sample(384, 5)] = NA
> plotScreen(screen, ncol=4, do.names=FALSE,
+           main="Example data", legend.label="Legend label")

```
